### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 2, 6, 7, 10, 11, 15, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramamurthy in the article "Wavelength Conversion in WDM Networking" in view of Jopson (U.S. Patent No. 5,822,476).

Regarding claims 1, 7, 10, and 16, Ramamurthy teaches a method for optically converting wavelengths in a multi-wavelength system having W wavelength channels, wherein W = 2N, the method comprising the steps of: selectively directing a received frequency channel corresponding to a respective wavelength channel based upon a predetermined frequency mapping (as seen in Figures 9 and 10), but differs from the claimed invention in that Ramamurthy fails to specifically teach shifting the frequency of the selectively directed frequency channel at least once by an amount defined by  $\pm 2^i \Delta f$ , wherein  $\Delta f$  is a frequency spacing between adjacent frequency channels, and  $i = 0, 1, \dots N-1$ . However, Jopson, teaches that frequency shifting by an integer of the frequency spacing is well known in the art (column 2 lines 17-50). One skilled in the art would have been motivated to shift a signal according to the frequency spacing between adjacent frequency channels in order to preserve the order of the information transmitted. Therefore, it would have been obvious to one skilled in the art at the time the invention was made to shift the frequency of the selectively directed frequency channel

Application/Control Number: 09/750,304

Art Unit: 2633

at least once by an amount defined by  $\pm 2^{i}\Delta f$ , wherein  $\Delta f$  is a frequency spacing between adjacent frequency channels, and i = 0, 1, ... N-1.

Regarding claims 2 and 6, 11, 15, the combination of references differs from the claimed invention in that it fails to specifically teach that wavelength channel ordering is preserved by only shifting the frequency of the selectively directed frequency channel to a higher frequency or lower frequency. However, one skilled in the art would clearly have recognized that it would have been beneficial to maintain channel ordering since doing so would also preserve information ordering. Therefore, it would have been obvious to one skilled in the art at the time the invention was made to preserve channel ordering by only shifting the frequency of the selectively directed frequency channel to a higher frequency or lower frequency.

## Allowable Subject Matter

3. Claims 3-5, 8-9, 12-14, and 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Agustin Bello whose telephone number is (703)308-1393. The examiner can normally be reached on M-F 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on (703)305-4729. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
